# What Can We Learn from Really Old Papers?

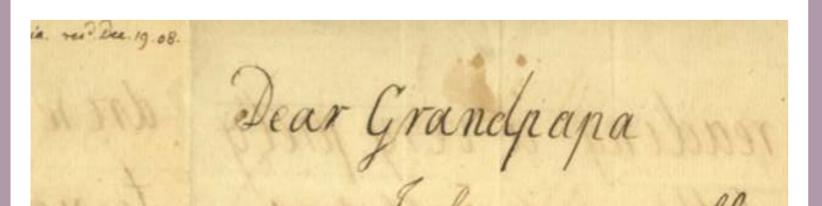

Old letters, drawings, diaries, and lists can tell us what people in the past did, thought, and felt. Reading these primary documents is like talking to someone from long ago. The Declaration of Independence stated that America was its own country, founded on the ideas of liberty and equality.

Archaeologists, oral historians, curators, and archivists all use primary documents in their jobs. Rough drafts show us that it can take many tries to get your ideas right.

Kids tell us a lot about daily life. Jefferson's granddaughter Cornelia Randolph wrote this when she was 8 years old.

When in the course of himsen events it becomes may some proper . devolve the political barryte which have commented them with another and to Sume among the prevers of the corthe the month the prover station to which the laws of natione of of nations is god with them, a decent respect to the openions of mankied accounter that they should dealars the control and the control the second the second the second them. We hold these buths to para hand in soft of the the soft of the the soft of th life # There with present of Cappiness, that to secure there will, is - servicements and indichented moreny man, deriving their part powers from the concerne of the governed that showever any form of government better becomes deriver it there ends, it is the night of the people to elder

Rough draft of the Declaration of Independence, Library of Congress, Manuscript Division

Thomas Jefferson's design for his gravestone tells us what he thought were his most important contributions. Enslaved chef James Hemings wrote this list of kitchen equipment, which gives us clues about his skills and training.

could the nead feel any interest in Mone ments on other vernembrances of them, when, a anassemings Orign de Reisoussie Koves, OSEWY NUTERTWY The following would be to my Mances the most On the grain On the grain die or cube of 3. furthout an mouldings, surmounted by an Obelish of 6. f. bages, each of a single store: on the press of the Obeliek the following

### How do we know what Thomas Jefferson thought?

He wrote things down! In the Declaration of Independence, Jefferson told us who he thought should be in charge of America: the people, not a king!

a Reclamation by the Represent 1 as give UNITED STATES OF AMERICA in General a second 60 When in the course of human swints it becomes necessary for one proposed when in the course of human swints it becomes necessary for one proposed is anong the provers of the carts the sequence of them with another, and to assume the foreful of an another the sequence of them with another, and to assume huma big nature is god entitle them of decent expect to the gromeons of marking when the the should declare the car as which imped them of the fore of marking the head these truth to be way.

### Buildings Are About People

Buildings can tell us how people lived in the past. We can study old buildings to learn about the people who designed, built, and used them. We can take care of old buildings for people in the future. What can we learn from YOUR building design?

Kids replace mud and blocks between the logs to keep out the wind from the Hemmings Cabin. Sometimes we uncover decorations in rooms by scraping off layers of old paint.

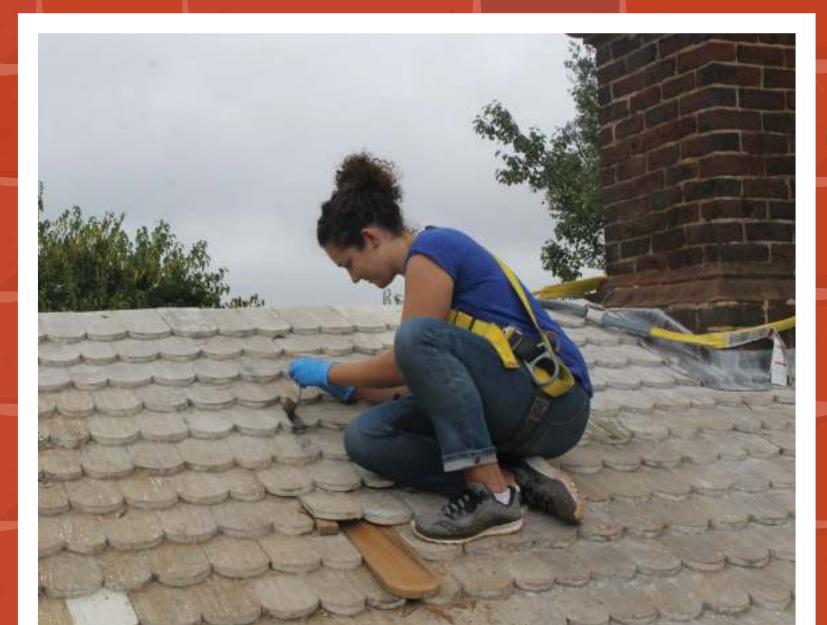

Old buildings have cracks in the walls and ceilings, which we patch and repaint.

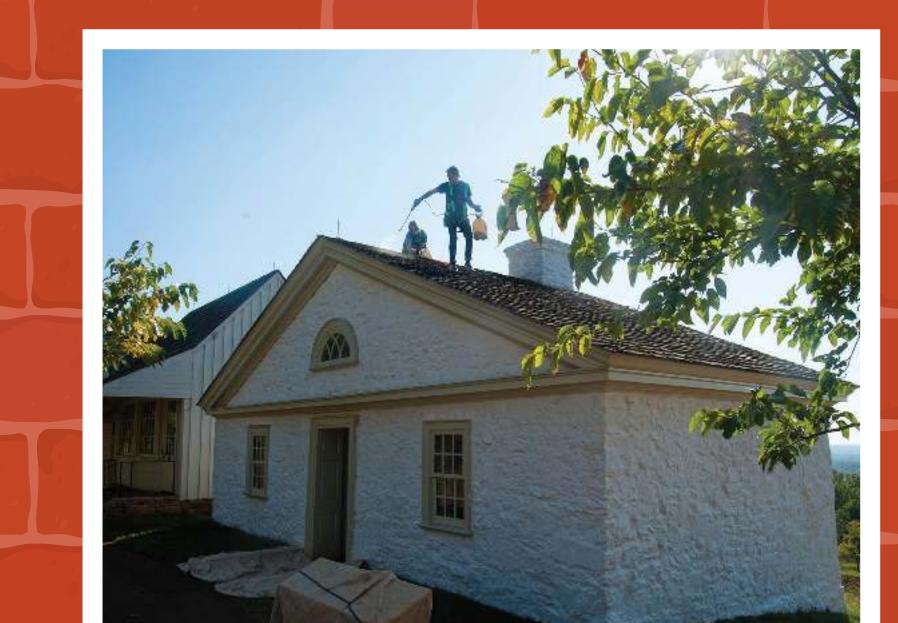

Roofs keep out the rain. We replace a shingle so this roof won't leak. Stone walls are strong but need mortar, which works like glue to paste the stones together. This roof is made from wood. We spray it with oil so the shingles don't crack.

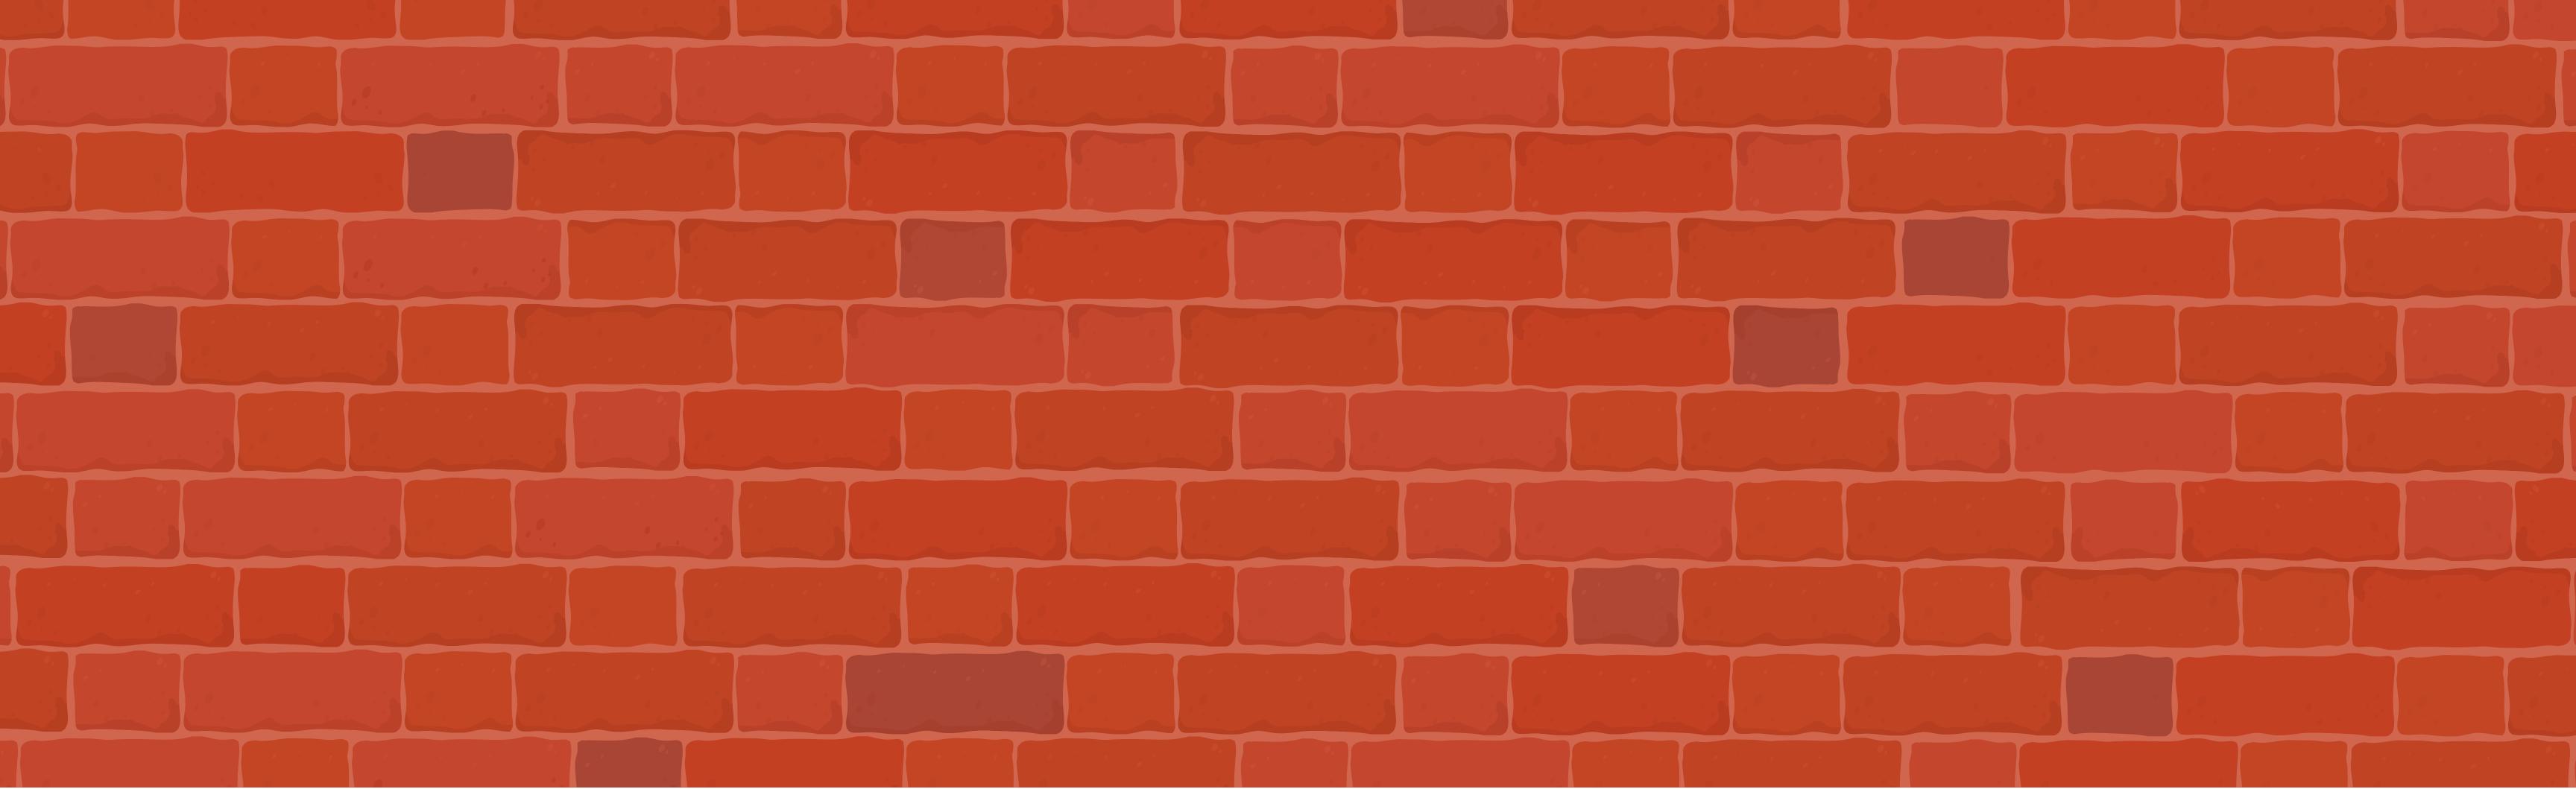

Why do we take care of old buildings?

Because they can show us things like how people lived, worked, and stayed safe from bad weather.

# Telling Your Story is History

Oral history is a way to learn about people, values, and lessons of the past through spoken stories.

YOU can do oral history! Ask questions, listen closely, and record the answers.

Descendants of Peter Hemings share stories about their ancestors - family members from long ago.

Oral historians use a camera and microphone to record oral history from the Granger family.

"Families pour their stories into their children. Children become a vessel for their elders' stories."

#### Dr. Dianne Swann-Wright

Co-founder of Monticello's Getting Word African American Oral History Project

# What Do Archaeologists Do?

Archaeologists are scientists who learn how people lived in the past by studying the objects they left behind. What will future archaeologists learn about you from the objects you use every day?

Archaeologists excavate (dig) for artifacts - things left behind by people long ago. In the lab, archaeologists record information like what the artifact is, where it was found, and how big it is.

Artifacts are often small, broken pieces of something larger. Sometimes those pieces show us what people's things, like this plate, looked like.

What happened to things that people threw away back then?

People threw things away outside, out of the way. Archaeologists dig these things up from the ground!
